February 5, 2009

Allegheny Ludlum recycled material is $\geq 75\%$ depending on grade and commercial issues. This is considered post-consumer material per definitions:

Post-consumer material is defined as waste material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose.

Pre-consumer material (or post industrial) is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind or scrap generated in a process and capable of being reclaimed within the same process that generated it.

A handwritten signature in black ink that reads "Tracy McFarland". The signature is written in a cursive, flowing style.
